Farming with passion

TerraCut point

SHALLOW CUTTING
IN MOST DIFFICULT CONDITIONS

TerraCut point

The newly developed HORSCH TerraCut point is used for shallow, all-over tillage at a depth of max. 8 cm.

The 40 cm wide wing coulter is combined with the well-known LD or LD+ point and can be used on all HORSCH TerraGrip shafts.

The shallow setting angle of the TerraCut point guarantees a safe cutting effect and a low mixing effect for an efficient drying out of the overgrowth or catch crops.

Strong arguments

- Shallow all-over cutting without compromise
- Can be combined with any TerraGrip shaft
- 40 cm wide coulter guarantees perfect overlapping with tine spacings up to 32 cm
- Simple handling
- Efficient working
- Working depths up to 8 cm
- Can also be used for shallow stubble breaking
- Excellent cutting effect due to low setting angle of the coulter
- Excellent penetration even in extremely hard soils due to the preceding point of the HORSCH LD or LD+ coulter

- 1** All-over, shallow cutting without compromise
- 2** Cutting instead of mixing
- 3** Efficient working with low horse power requirement
